

Iceramic surfaces are durable products, which will last for many years with simple care. Please follow these instructions to maintain your Iceramic.

**Everyday Care:**

Wipe the surface with a soft cloth or non abrasive scourer dipped in warm water with mild detergent. Rinse with water and dry with a paper towel

Always wipe up well spills

Check each cleaning product on an inconspicuous area to ensure that it doesn't damage the surface

Honed and Ultra rough finishes are more prone to metal marks, fingerprints and other signs of daily use which can easily be removed with a non abrasive cleaning product such as Cif cream or Bar keepers friend Spray.

**Stubborn Stains:**

Gently run the area with a soft cloth or Paper town with Bar Keepers Friend Spray

Clean a larger area in a circular motion than the stain

Rinse with water, and dry with paper towel

Repeat if stain is still visible, allow the Bar Keepers friend to soak in for a few minutes

**Dried Spills:**

Dried spills and stains should be reanimated with water or Bar Keepers Friend Spray for several minutes before attempting recommended cleaning methods

**Metal Marks:**

Rub Gently with a latex eraser

Clean the surface with a damp cloth

Please note that Honed/silk finishes require more cleaning than our Polished finishes, and metalmarks, fingerprints and other signs of daily living may be more visible. However, most of these marks can be removed with little effort and non-abrasive cleaning products such as CIF cream or Cillit Bang Bleach & Hygiene, or the Bar Keepers Friend Spray
